Overview

This image dataset consists of 6 different classes of vehicles including cars, trucks, vans, buses, motorbikes, and threewheels. There are 2100 training images and 900 testing images. The images have annotations bounding boxes included which include the height and width of each image, and each respective class, and geometry type to surround the object. In this notebook, I will organize all of my images into folders, and perform an EDA on the image data to understand what we are working with!
